Rare Ovarian Cancer Inc. - ROC Inc

Welcomes you to this Webinar for
Granulosa Cell Tumour (GCT), a rare ovarian cancer.

Q & A session on treatment, challenges and research
with three international experts on GCT.

Professor Peter Fuller Head of Endocrinology Unit, Monash Health Centre for
Endocrinology and Metabolism Hudson Institute of Medical Research

Dr Simon Chu research head of Hormone Cancer Therapeutic Laboratory
at the Hudson Institute of Medical Research.

Professor Tom Jobling, Director of Gynaecology Oncology at Monash Health

Rare Ovarian Cancer Inc. - ROC Inc. is a Not for profit organisation formed in 2018 in response to a Mother whose daughter was diagnosed at 16 years old with a rare ovarian cancer that had received no research.

ROC Inc vision is to create a greater awareness for ovarian cancer, it's symptoms and to ensure infants to women with rare ovarian cancer receive funded research for better options for treatment, intervention and prevention.

Granulosa Cell Tumour (GCT), a rare ovarian cancer that has two sub types adult -aGCT and juvenile jGCT.

These tumours arise due to the dysfunction of the granulosa cells inside the ovary and are different from the more common forms of ovarian cancers which stem from the surface of the ovary.

GCT accounts for approximately 8-10% of all ovarian cancers, affecting patients as young as infants to post-menopausal women.

GCT has an unexplained tendency for late recurrence which can be up to 40 years later.

Have you been diagnosed with Granulosa Cell Tumour either aGCT or jGCT and want to be apart of the research?

The Hudson Institute of Medical Research located in Melbourne, Australia needs GCT tumour samples (both aGCT and jGCT) and DNA (saliva kit) samples to be able to do research, for better options for treatment, intervention and prevents.

If you would like to find out more information about how you can participate please send Tasha an email to tasha@rocinc.org.au

Your information will be then passed on to either Sue or Linda to contact you if you are from outside of Australia.

Together we can create change for the future.

Help raise money for GCT research

You can donate at www.rocinc.org.au

Research is the only way to improve the prevention, detection and treatment options for Granulosa Cell Tumours.

You can help raise funds for research by holding fundraising event, trivia night, bake sales, office raffle, a sausage sizzle or try rock painting for awareness with facebook group Rock for ROC.

ROC Inc has raised over \$50,000 so far towards the research, there is currently a grant application in with the Australian Governments Medical Research Future Funds (MRFF) for GCT research.

Together we can create change for the future.

Sharing Butterfly Wings of Awareness.
So Ovarian cancer
doesn't make more Angels.
